

EDWARD SPAAY

Infrastructure Security Architect | Enterprise Hardening | CIS/NIST/STIG | AD/GPO | Tenable | ServiceNow

Sykesville, MD | U.S. Citizen | nebet52@outlook.com | [linkedin.com/in/edwards-engineer](https://www.linkedin.com/in/edwards-engineer) | <https://github.com/yaa194098-tech/EdwardS>

EXECUTIVE SUMMARY

Enterprise Infrastructure Security Architect and Senior Security Engineer with 18+ years of experience securing complex, regulated environments through OS hardening, Active Directory and Group Policy security, vulnerability management, and compliance engineering. Proven record leading enterprise security baseline implementation aligned with CIS, NIST, and DISA STIG frameworks; integrating Tenable vulnerability data with ServiceNow remediation workflows; and improving audit readiness, risk reduction, and operational security posture across large-scale infrastructure environments.

SECURITY ARCHITECTURE IMPACT

- Designed, implemented, and enforced enterprise security baselines across multi-platform infrastructure environments supporting regulated business operations.
- Architected Active Directory and GPO-based security configurations to standardize hardening, reduce configuration drift, and support enterprise control enforcement.
- Established vulnerability remediation lifecycle practices integrating Tenable findings, ServiceNow workflow governance, remediation ownership, and risk-based prioritization.
- Partnered with security, infrastructure, operations, and audit stakeholders to align technical remediation with enterprise risk management and compliance requirements.
- Improved compliance posture and audit readiness through standardized security configuration enforcement, remediation reporting, and repeatable control validation.

CORE COMPETENCIES

Infrastructure Security Architecture | Enterprise OS Hardening | Active Directory Security | Group Policy / GPO Architecture | CIS Benchmarks | NIST Security Controls | DISA STIG Alignment | Vulnerability Management | Tenable | ServiceNow | Endpoint Security | Windows Server Security | macOS Hardening | Security Baseline Engineering | Remediation Governance | Audit Readiness | Risk Reduction | Configuration Management | Cross-Functional Technical Leadership

TECHNICAL ENVIRONMENT

Platforms / Infrastructure: Windows Server, enterprise Windows environments, Active Directory, Group Policy, endpoint infrastructure, macOS environments

Technologies: Apple macOS (6 years), Azure Foundation (2 years), Cisco MDS & Nexus switches (9 years), primary administrator for Windows critical devices (9 years), Oracle DB (9 years), Solaris (9 years), WebLogic (9 years), Oracle Cloud Infrastructure (1 year), Salesforce (9 years)

Supported: Microsoft cloud platforms; Tenable.sc and Tenable.io; and enterprise vulnerability scanning to ensure all nodes report daily, with alerts when a node stops reporting.

Scanners: Tenable.sc / Tenable.io (9 years), **Wiz:** (2 years)

ThreatLocker: MacOS (4 years)

Security / Compliance: CIS Benchmarks, NIST, DISA STIGs, OS hardening, security configuration baselines, audit readiness, control validation

Tools / Workflow: Tenable vulnerability management, ServiceNow remediation workflows, enterprise ticketing, vulnerability lifecycle management

PROFESSIONAL EXPERIENCE

Independent Security & Compliance | Sykesville, MD | Part Time

- Maintaining current hands-on work in Active Directory, GPO hardening, vulnerability management, and compliance architecture while targeting enterprise infrastructure security architecture roles.

MissionSquare Retirement | Senior Engineer, Infrastructure Configuration | Washington, DC | 01/2016 - 11/2025

- Led enterprise infrastructure security hardening across 9 technologies, supporting regulated retirement and financial services operations.
- Implemented and maintained hardened security baselines aligned with CIS, NIST, and DISA STIG requirements, supporting 100% compliance posture across assigned technology domains.
- Architected and enforced Active Directory and GPO-based security configurations to strengthen domain environments, standardize controls, and reduce security configuration drift.
- Reduced vulnerability exposure by approximately 30% through coordinated remediation lifecycle management, risk-based prioritization, and cross-team execution.
- Integrated Tenable vulnerability management data with ServiceNow remediation workflows to improve visibility, accountability, ticket ownership, and remediation tracking.
- Partnered with Enterprise Security, infrastructure engineering, operations, and audit stakeholders to align technical remediation with enterprise risk and compliance objectives.
- Improved audit readiness by standardizing security baseline enforcement, remediation reporting, vulnerability status tracking, and repeatable compliance evidence practices.
- Provided senior-level infrastructure security expertise across endpoint hardening, vulnerability remediation, configuration management, and enterprise control validation.

Social Security Administration Headquarters | Senior Engineer | Woodlawn, MD | 1999 - 2014

- Supported federal-scale infrastructure security across 100,000+ servers, 12 domains, and 19 data centers.
- Implemented security baseline hardening aligned with CIS, NIST, and STIG practices across large enterprise server environments.
- Led Microsoft critical alert patch deployments and security remediation efforts supporting enterprise risk reduction and operational continuity.
- Contributed to infrastructure security governance, configuration consistency, and enterprise control enforcement across complex federal environments.
- Received SSA Associate Commissioner Citation in June 2007 for high-impact technical contribution and service excellence.

CERTIFICATIONS & EDUCATION

- CISSP Candidate - In Progress
- Broward Community College
- Western High School - Diploma, June 1989
